Mining Application Clarity Sprint

Your technology has potential in mining. But which application should you pursue first, and what would a credible demonstration need to prove?

What you need

For technology CEOs and CTOs exploring mining: choose your first mining application and define what your demonstrator needs to prove in a focused sprint, normally completed within 2 to 3 weeks, before your team builds on assumptions.

Choose where to start. Know what to prove.

Turn your technology's potential into a focused mining application. Compare the options, understand the operating context and identify the evidence you need before committing resources to a demonstrator.

What you leave with

- A comparison of up to three related mining applications, with one recommended starting point and the reasons behind it.
- A defined mining use case showing where and how the technology would be used, who would be involved and the main operating constraints.
- A clear objective for what your first mining demonstrator needs to prove.
- A 90 day validation action plan, with focused questions for your team's customer and partner conversations.
- An executive review and editable working records capturing the recommendation, assumptions, risks and next decisions.

How it works

Review your technology, available evidence and candidate applications with your leadership and technical team. Compare the options against mining workflows and deployment constraints. Recommend a primary application, define the demonstration context and proof objective, then review the findings and next actions with leadership.

Combine your team's technology knowledge with Spyke's mining experience to shape a clear application, focus your customer conversations and prepare for the next stage.

Your next step is your choice

Use the findings to focus your customer conversations, refine your direction or move into demonstrator definition. Move forward with your own team or continue with Spyke. The choice is yours.

Investment

CAD $7,500 fixed fee, plus applicable taxes and applicable travel costs if in person meetings are desired.

Terms: 50% at mobilization and 50% upon delivery.

Continuation bonus: receive a CAD $2,000 credit toward our Mining Demonstrator Definition Sprint when you complete this sprint.

Spyke Delivery Promise

If our work does not meet the agreed requirements, we will make it right at no additional professional fee. If we cannot resolve your concerns to your satisfaction, we will refund or waive the professional fee allocated to the affected work.

Availability

One opening available per month. Next available start is in January 2027. Secure it before December 15th, 2026.
