Mining Demonstrator Definition Sprint

You know which mining application to pursue. But what should your demonstrator include, and how will you test whether it proves what matters?

What you need

For technology CEOs and CTOs preparing a mining demonstration: define your demonstrator requirements and validation plan in a focused sprint, normally completed in 5 to 7 weeks, before committing to detailed design and build.

Define the right demonstrator. Build with purpose.

Turn your mining application into a clear definition of what to build and how to demonstrate its value. Give your team and delivery partners a shared foundation for design, build and testing.

What you leave with

- A defined demonstration use case showing how the demonstrator will fit into the intended mining workflow.
- A clear system scope and configuration, including the key mechanical, power, data and operational interfaces.
- Prioritized requirements that connect what the demonstrator needs to do with what it needs to prove.
- A validation plan showing what to test, what evidence to collect and how to judge success.
- An executive review and editable working documents capturing the requirements, risks and next decisions before design and build.

How it works

Start with your selected mining application, whether established through a Spyke clarity sprint or your own team's work. Together, confirm the operating context and demonstration objective. Define the requirements, key interfaces and validation approach, then review the package with your leadership and technical team.

Combine your team's technology knowledge with Spyke's mining experience to focus the demonstrator on what matters and prepare a clear handoff to the people who will design, build and test it.

Your next step is your choice

Use the definition package with your own team and preferred delivery partners, or engage Spyke for selected support. You keep ownership of your technology and the choice of how to move forward.

Investment

CAD $20,000 fixed fee, plus applicable taxes.

Completed our Mining Application Clarity Sprint? Apply your CAD $2,000 continuation credit and move into demonstrator definition for CAD $18,000.

Terms: 50% at mobilization, with the remaining balance upon delivery.

Included bonus: a remote implementation kickoff and a remote design review to help your team carry the requirements into design and build. CAD $750 service value.

Spyke Delivery Promise

If our work does not meet the agreed requirements, we will make it right at no additional professional fee. If we cannot resolve your concerns to your satisfaction, we will refund or waive the professional fee allocated to the affected work.

Availability

One opening available every two months. Next available start is in January 2027. Secure it before December 15th, 2026.
